## PROFESSIONAL SUMMARY

- 3 years of experience in software development.
- Skill in building scalable, high-performance web applications with frontend and backend integration.
- Adapt at problem-solving and continuously learning new technologies to enhance development efficiency.
- Flexible, willing to learn and take responsibility.

## TECHNICAL SKILLS

- **Programming Languages:** TypeScript, JavaScript
- **Frameworks and Libraries:** React.js, Angular.js, Next.js
- **State Management:** Redux
- **Backend and Databases:** Node.js, MySQL, MongoDB, Prisma
- **Web Technologies:** PWA, Websocket, Firebase
- **CSS Frameworks:** TailwindCSS, Bootstrap
- **UI Component Libraries:** PrimeNG, Shadcn UI, Antd
- **Tools:** Cursor Agent, Oauth2, GIT, Postman, Swagger, Jira
- **Soft Skills:** Team Collaboration, Problem Solving, Time Management, Agile (Scrum)

## EDUCATION

- Education: Information of Technology University Ho Chi Minh

## PROFESSIONAL EXPERIENCES

07/2025 - Present

**Company:** Hiptech Solution - (Full time)

**Project name:** Warp AI

**Project description:** Build system for allow install application from website.

**Position:** Frontend developer

**Responsibilities:**

- Build UI and setup source.
- Handle realtime connection by SignalR.
- Integration with Bootstrap to send and retrieve installation events.
- Config package file for some applications by Power Shell.

**Technologies used:**

- Frontend: React.js, SignalR
- Backend: Bootstrap (C#)

03/2024 - 06/2025

**Project name:** Magicblocks AI - Hiptech Solution

**Project description:** Build and provide AI bot services for websites in embedded form

**Position:** Full stack developer

**Responsibilities:**

- Build local shared packages like database and interfaces.
- Implement and improve UI/UX
- Develop friendly interfaces that adapt to multiple devices like desktop, tablet and mobile.
- Setup and integrate channels for Agent like Twilio and Instagram.
- Optimize data processing by caching in Cloudflare and API request.
- Problem solver.

**Technologies used:**

- Frontend: React.js, Next.js, OAuth2.
- Backend: Next.js, AWS, Vercel, MySQL, MongoDB, Cloudflare.

12/2024 – 04/2025

**Project name:** Tinda - Azubi

**Project description:** Build mobile application for a center that connects between companies and job seekers.

**Position:** Frontend Developer - Project Manager

**Responsibilities:**

- Work directly with client and make a full plan with Agile.
- Design system for application.
- Setup working source like Github, Jira and Confluence.
- Setup source code for React Native app.
- Build UI and integrate features with Backend team.
- Support team members about technical and requirements.

**Technologies used:**

- Frontend: React Native (Expo).
- Backend: Node.js, MongoDB, Docker, Cloudflare R2, Twilio.

09/2023 – 03/2024

**Project name:** Block24 - TradecoinVN

**Project description:** Website that connects to a huge of users and traders. It gives a lot of knowledge and experience in trading

**Position:** Frontend Developer

**Responsibilities:**

- Optimize performance in Frontend side.
- Improve UI and UX.
- Collaborate with team members to define and improve flows to attract users.
- Resolve high and complex issues.
- Connect Web3 wallet.
- Clean and refactor the source for scalability.
- Support team members.

**Technologies used:**

- Frontend: Next.js, OAuth2.
- Backend: Node.js, MySQL, Docker, Cloudflare.

12/2022 – 07/2023

**Project name:** Game Application

**Project description:** Application that supports multiple players, realtime and seamless cash. It allows to integrate to another website game platform

**Position:** Full stack Developer

**Responsibilities:**

- Build and optimize the complex UI components using Next.js, NextAuth.js, and Tailwind CSS, enhancing performance and maintainability.
- Design database flow with MySQL and MongoDB.
- Build RESTful APIs with Node.js and Socket.io, reducing real-time latency by 150ms, leading to smoother and faster interactions.
- Config Firebase to store files.
- Setup Seamless APIs for integrating to another platform.
- Setup and manage project deployments by using aaPanel, ensuring reliable server management and maintenance.

**Technologies used:**

- Frontend: Next.js, NextAuth.js, Socket.io.
- Backend: Node.js, MySQL, MongoDB, Firebase.

01/2022 – 11/2022

**Project name:** Order Food - Cardwatch POS

**Project description:** Ordering food application that supports for members in the specific community

**Position:** Frontend Developer

**Responsibilities:**

- Build codebase, code review, problem solver.
- Lead the frontend development of a POS system used by a Canadian agency, streamlining customer management and order processing.
- Build a reusable UI component library (published), reducing development time for new features by 50%.
- Research and integrate CPOS printer support, allowing seamless transaction printing directly from the platform.

**Technologies used:**

- Frontend: Next.js, PWA.
- Backend: Java, PostgreSQL, Docker, Nginx.
