

LE THE PHUC

Software Engineer

(+84) 368341595 lethephuc2002@gmail.com Ho Chi Minh City, Viet Nam

SUMMARY

I have experience with 3+ years in building high-performance web applications using **ReactJS**, **NextJS** and **Typescript**. Skilled in real-time systems, scalable architectures, and seamless API integration. Experienced in using **NodeJS** to build high speed server, and designing scalable database with **MongoDB** and **MySQL**. Strong in debugging, optimizing frontend logic, and delivering smooth, reliable user experiences for gaming and Web3 platforms.

Specialties

- Experience in building high-performance web applications using ReactJS, NextJS, and TypeScript.
- Skill in developing high-speed servers with NodeJS and designing scalable RESTful APIs.
- Experience in building AI Chatbot platforms and implementing real-time communication via Socket.io and SignalR.
- Proficient in developing cross-platform mobile applications using the React Native (Expo) ecosystem.
- Experience with MySQL, MongoDB, Supabase.
- Competent in deploying and optimizing services using Cloudflare (Workers/R2).
- Can use English conversationally, good at reading and writing skills.
- Ability to research new technology quickly.
- Easy to adapt to the under-pressure working environment.
- Good at teamwork and communication.

TECHNICAL STACKS

- Languages: Javascript, Typescript.
- Frameworks and Libraries: ReactJS, NextJS, Expo Native.
- State Management: Redux.
- Backend: NodeJS.

- Databases: MySQL, MongoDB, Supabase.
- ORM: Prisma.
- Caching and DNS: Redis, Cloudflare.
- Web Technologies: PWA, Websocket, Firebase.
- CSS Frameworks: TailwindCSS, Bootstrap.
- UI Component Libraries: PrimeNG, ShadcnUI, Antd.
- Testing: Jest.
- CI/CD: Github Actions.
- Version Controls: Gitlab, Github.
- Tools: Postman, Swagger, Jira.
- Methodologies: Agile, Kanban.
- AI Tools: Cursor Agent, Github Copilot.

EDUCATION

2020 - 2024

University of Information Technology Ho Chi Minh

Software Engineering

WORKING EXPERIENCES

03/2024 - Present

Company: Hiptech Solution

Project name: Magicblocks AI Chatbot

Project description: Developed an **embeddable AI chatbot platform** enabling websites to engage users via responsive, interactive bots across desktop, tablet, and mobile. Integrated multi-channel communication including Twilio SMS and Instagram messaging.

Project size: 10 members

Role: Fullstack Developer

Responsibilities:

- Built **shared modular packages** including database schema and reusable interface components to support scalable development.
- Implemented and improved **UI/UX for interactive** bot widgets.
- Developed **responsive interfaces** optimized for desktop, tablet, and mobile.

- Set up and integrated **multi-channel communication** for the AI Agent including **Twilio** and **Instagram**.
- **Optimized backend performance** using **Cloudflare** caching and efficient API request handling, improving data delivery speed.
- **Built Webhook configuration** to communicate between Cloudflare workers.
- Built **persona management** to set the traits and tone that shape how AI behaves.
- Applied **Clean Architecture** principles to build reusable component libraries and frontend packages.
- Performed **Unit and Component testing using Jest** to ensure the robustness of interactive bot features.
- Acted as a key problem solver, diagnosing complex technical issues across both frontend and backend layers.

Technologies: ReactJS, NextJS, OAuth2, AWS, Vercel, MySQL, MongoDB, Pinecone, Cloudflare, Prisma.

03/2023 – 02/2024

Company: Azubi in Germany

Project name: TindaJob

Project description: Developed a mobile application for a center that bridges companies and job seekers, aiming to streamline job discovery, application processes, and communication between candidates and employers.

Project size: 7 members

Role: Software Engineer - Product Manager

Responsibilities:

- **Collaborated directly with clients** to gather requirements, define project scope, and create detailed Agile project plans.
- Designed and implemented a comprehensive design system to ensure consistency across the mobile application.
- Configured project management and source control tools, including **GitHub** for code repository, **Jira** for task management, and **Confluence** for documentation.
- **Set up and maintained** the React Native (Expo) codebase, ensuring scalable and maintainable architecture.
- Developed and optimized UI components, integrated features with backend APIs, and ensured seamless interaction between frontend and backend services.
- Translated complex **business requirements into technical specifications** and managed **Workflow Development** within an Agile team.
- Utilized data structure libraries to manage complex application states, ensuring **maximum performance** across various devices.

- Mentored and supported team members in understanding **technical requirements, best practices, and project workflows.**
- Participated in code reviews, debugging, and performance optimization to deliver a robust and user-friendly application.

Technologies: React Native (Expo), Websocket, NodeJS, MongoDB, Supabase, Redis, Docker, Nginx, Cloudflare R2, Twilio.

01/2022 – 02/2023

Company: TradeCoinVN

Project name: Block24

Project description: Block24 is a blockchain-enabled trading and community platform connecting a large network of crypto users and traders. The platform includes wallet integrations, secure authentication flows, and scalable UI components designed for high-traffic Web3 applications.

Project size: 11 members

Role: Frontend Developer

Responsibilities:

- Built a **scalable Web3 provider layer** to integrate Solana wallets (Phantom, Solflare, etc.) and ensure reliable user authentication and transaction signing.
- Integrated **Web3Auth** to improve multi-chain login flows using OAuth2 and blockchain wallets.
- Worked closely with backend and smart-contract teams to support **on-chain interactions**, such as fetching account data and broadcasting transactions.
- Refactored and modularized Web3 utilities, improving long-term maintainability and allowing future expansion for **EVM/Solana hybrid integrations**.
- Implemented a **Redux-based state management** system to handle wallet state, session state, token balances, and asynchronous blockchain data consistently.
- Collaborated with cross-functional teams to design user flows tailored for blockchain users, including authentication, transaction flow, and asset display.
- Optimized React components for maximum performance in a high-traffic environment.
- Coordinated with infrastructure teams to ensure seamless **API integration** and high-quality code delivery.

Technologies: NextJS, OAuth2, Redux, NodeJS, MySQL, Redis, Docker, Cloudflare, Web3Auth, Solana wallet provider, Smart Contract
